

BUSINESS PROPOSAL

To:
AMERICAN GULF SCHOOL .LLC

Attn: Mr.Baha Jallad

Al Rahmaniya 4, Sharjah, 971, behind Al Dhaid
Street, Sharjah, United Arab Emirates

Tel : 0501768769

Email : b.jallad@ags.ae

Quote No : 6071 - 1

Quote Date : 23/06/2025

Quote Validity : 2 Weeks

Payment Terms : Advance Payment

Delivery Time : 2 Weeks

By

Monica Jasmilona

Quotation

No	Description	Qty	Unit Price	Total
1	Network Reconfiguration and Security Optimization: Core Switches Reconfiguration - Backup existing configuration before changes. - Review the existing Core switch configurations. - Review the Switch Stacking. - Reconfigure core switches with new VLAN design. - Consider the Core Switch as SVI for all the VLAN in the network. - Configure the DHCP replay in the core switch. - Enable the DHCP for all the VLANs (Preferred to run in the local AD server). - Create and assign Management VLAN for all network devices (This VLAN should be different IP schema for the security reason. - Ensure seamless communication between core and access layers. - Tagging new VLANs to the uplink port in the core switches and make sure all VLAN communicate via uplink port. - Validate routing and inter-VLAN communication post-configuration - Testing and commission of the switches after the changes Access Switches (27 Nos) Reconfiguration - Backup current configuration of all access switches. - Implement new VLAN configuration as per updated network design. - Assign access ports to the respective VLANs. - Configure trunk links towards the core switches. - Tagging all new VLANs to the uplink ports. - Migrate each switch under the Management VLAN. - Assign the new Management IP address to the switches. - Test connectivity and VLAN assignment on end devices. - Ensure network loop protection mechanisms are in place (e.g., STP) Access Points Reconfiguration and Optimization - Reconfigure APs to operate under the new Management VLAN. - Review and harden AP configurations for improved security (e.g., WPA3, disable unused services). - Optimize access point placement and signal ranges for better coverage and performance. - Assign VLANs to SSIDs for proper user segmentation (staff, guest, IoT, etc.). - Conduct post-deployment wireless survey to validate coverage. - Hardening the Cloud controller with required securities. Firewall (Sophos XGS3300 in HA) Hardening and Optimization - Review and document current firewall configuration and HA status. - Fine-tune existing security policies to align with organizational policies. - Implement global firewall policies for consistent protection across the network. - Apply VLAN-based internet access policies with role-based restrictions (as of now global polices only possible) - Disable unused services and ports to reduce the attack surface. - Ensure firewall logs and alerts are appropriately configured and monitored. - Conduct vulnerability scan and apply recommended best practices. Network Segmentation and Policy Enforcement - Evaluate current segmentation and identify gaps. - Implement segmentation rules for VLANs such as management, staff, student, CCTV etc. - Ensure inter-VLAN routing is restricted based on least privilege principle. - Apply firewall rules to enforce access controls between VLANs. - Test segmentation policies for intended access and isolation. Documentation and Handover - Update network diagrams to reflect new VLANs and topology. - Documentation of switch and firewall configurations. - Deliver a summary report detailing tasks completed, issues encountered, and resolutions. - Conduct a knowledge transfer session for IT staff. Post- Implementation Support: - Provide support for up to 2 weeks post- deployment to address any issues. - Monitor network stability and performance during the support period. - Fine-tune configurationsbased on operational feedback. Cabling Tracing and Labelling - Identify and trace all existing network cables from endpoints to switches. - Verify proper connectivity and resolve any mismatched or faulty connections. - Label all cables with unique identifiers for easy identification. - Update network documentation to reflect accurate cabling paths and labels. racks and cable trays. - Ensure neat and organized cabling within	1	26,000.00	26,000.00
Total AED				26,000.00
